Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall automatically queue uploaded student project ZIP files for evaluation.	High	Pass: A valid uploaded project appears in the evaluation queue. Fail: The project is not added to the queue.	Ensures submitted projects enter the evaluation process.
FR-002	Functional	The system shall execute the pre-configured unit test suite on each queued project.	High	Pass: The configured test suite executes and its results are recorded. Fail: The test suite is not executed or results are not recorded.	Provides test results for automated evaluation.
FR-003	Functional	The system shall generate an itemized rubric score based on the evaluation results.	High	Pass: A score is generated for every configured rubric criterion. Fail: Any configured criterion has no score.	Provides automated rubric-based assessment.
FR-004	Functional	The system shall automatically assign submitted projects to eligible peer reviewers.	Medium	Pass: Each eligible submission is assigned to the required peer reviewer(s). Fail: An eligible submission remains unassigned.	Reduces manual peer-review distribution effort.
FR-005	Functional	The system shall allow users to view the evaluation	High	Pass: Test results and the itemized rubric score can be viewed after evaluation. Fail:	Allows users to access

		results of submitted projects.		The completed evaluation results cannot be viewed.	evaluation outcomes.
NFR-001	Nonfunctional — Performance & Scalability	The system shall handle up to 100 concurrent project submissions without dropping queue items or exceeding a 1.5 GB memory footprint.	High	Pass: Under 100 concurrent submissions, no queue item is lost and memory usage remains ≤ 1.5 GB. Fail: A queue item is lost or memory exceeds 1.5 GB.	Ensures reliable operation under peak submission load.
NFR-002	Nonfunctional — Security	The system shall restrict access to student submissions and evaluation results to authorized users.	High	Pass: Unauthorized users are denied access. Fail: An unauthorized user can access another user's submission or evaluation result.	Protects student projects and evaluation data.
