USE-CASE FLOW SPECIFICATION

UC-01 — Submit Project

Primary Actor: Student

System: Automated Rubric Assignment Evaluator

1. Preconditions

1. The student has a project ZIP file ready for submission.
2. The student is authorized to submit a project.

2. Postconditions

1. The valid project submission is stored by the system.
2. The project is added to the evaluation queue.
3. The submission status is displayed to the student.

3. Main Success Scenario

1. The student selects **Submit Project**.
2. The system displays the project upload interface.
3. The student uploads the project ZIP file.
4. The system validates the uploaded project file.
5. The system accepts the valid project submission.
6. The system stores the submitted project.
7. The system adds the project to the evaluation queue.
8. The system displays the submission status to the student.
9. The use case ends successfully.

4. Alternate Flow — Invalid Project Submission

- 4a.** The system detects that the uploaded project file is invalid or corrupted.
- 4b.** The system rejects the project submission.
- 4c.** The system displays an appropriate error message to the student.

4d. The student uploads a valid project ZIP file.

4e. The system resumes the submission process from Step 4 of the Main Success Scenario.
